Clinical practicum is a critical component of the education counselors and psychologists

The supervision of clinical sessions is equally critical for both the faculty and students. A modern AV system can both improve the supervision process and the overall clinical education experience.

VALT was built from the ground up for clinical education programs. The VALT solution makes video observation and recording simple and effective yet provides powerful tools to meet all the confidentiality and security needs of a functioning clinical environment. Beyond standard supervision requirements VALT can become a valuable educational and research tool for Clinic Directors, Supervisors and Students. The intuitive, easy to use browser interface can provide critical feedback and evaluation for both the student and client while comprehensive reporting tools can map client progress and build a powerful research database.

VALT is currently in use at many higher education counseling programs, centers and clinics worldwide. Contact IVS today to learn more about how the VALT solution can help improve the effectiveness of your programs clinic rooms.

FEATURES

- HDTV Cameras for any size room
- HQ microphones with perfect AV synch
- Simple browser-based software interface
- Data encryption to meet HIPPA requirements
