SOLVE THE CHALLENGES OF DISPARATE A/V TECHNOLOGY WITH IVS

Create an enterprise-wide A/V capture solution for observation, recording and research to use across all departments in your organization.

Your Challenges		IVS Solutions
Failed Technology Deployments	• Complex workflow • Complicated user interface • Adaptive solutions hinder more than help	• **VALT is purpose-built to improve existing workflows** • **VALT's custom data fields for video indexing and annotation simplify retrieval, feedback, and reporting** • **VALT's granular user permissions shorten the learning curve and streamline workflow**
High Acquisition Costs	• Pieced together solutions have higher up-front costs • Acquiring multiple systems repeats the procurement process and extends time to implementation • No economies of scale	• **IVS is a one-stop-shop for software, hardware, and professional services** • **A single VALT instance provides any number of your programs with their own unique and secure video capture experience** • **VALT scales to support any number of cameras, rooms, and users**
High Maintenance & Support Costs	• More hardware means more potential points of failure and ongoing maintenance costs • Disparate systems require multiple points of contact to resolve issues • Challenging to maintain implementation standards	• **VALT's centralized platform is a more stable solution** • **One enterprise-wide system vendor, IVS, means one point of contact when you need support** • **Deploy one validated VALT system across your organization**
Security	• Video traffic may not be encrypted • User permissions are too broad • Last minute fire drills for IT	• **VALT supports the latest TLS encryption protocols** • **VALT's robust permission structure helps you comply with policy and procedure** • **VALT's Detailed audit logs capture application activity**
